      A new method to regulate muscle growth

25 Disclosure; Page 121-121; 130pp; English.

26 Invention relates to a method for modulating the formation and/or invention relates to a method for modulating the formation and/or maintenance of muscle tissue by ecotopically contacting muscle cells, especially muscle stem/progenitor cells, in vitro or in maintenance of muscle stem/progenitor cells, in vitro or in cells, especially muscle stem/progenitor cells, in vitro or in molecule that mimics the effect of hedgehog porteins on patched signalling, or activates or potentiates patched signalling, or activates or potentiates patched signalling, in an amount effective to alter the growth state of the treated cells.

27 Also claimed is a method for treatment or prevention of disorders of, or surgical or cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac muscle atrophy, cacheaia, or muscular myopathy atrophy or cardiac muscle atrophy, cacheaia, or muscular myopathy atrophy or cardiac muscle atrophy, cacheaia, or muscular myopathy calling portion of myoblastic or neoplastic growth of muscle tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myopathy comprises at least a bloactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog gene (see X25098-107), especially a human hedgehog gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              74-MAR-1999; U17922.

Claim 4; Page 24-25; 39pp; English.

Chair 1s the amino acid sequence of a precursor of a novel human beart hedgehog protein, as deduced from a cDNA clone (see V62395).

Chair 2d from cell line ARH-77 (ATCC CRL-1621). The mature form clonal antibody (MAD) that recognises the protein, a process for producing the protein, and a method for detecting the protein.

Chair 2d from cell line ARH-77 (ATCC CRL-1621). The mature form concolonal antibody (MAD) that recognises the protein, a process for producing the protein, and amethod for detecting the protein.

Chair 2d for producing the protein, and the MAD is useful for detecting and purifying the protein, and the MAD is useful for detecting and purifying the protein. The hedgehog protein, abnormalities in humans to establish their treatments and diagnoses.

The sequence represents a mouse Indian hedgehog protein, homologout to a Drosophila hedgehog protein (R77337), and is encoded by a cDN isolated by low stringency screening of a mouse genome DNA library probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy.

Antibodies generated from the protein may be used as therapeutic c

                        Pri Method for limiting damage to neurons caused by ischaemic or epoxic pri conditions - is used for the treatment and prevention of e.g. conditions - is used for the transient ischaemic or epoxic pri cerebral infarction, stroke and transient ischaemic attacks Disclosure; page 65-66; 104pp; English.

CC A method has been developed for limiting the damage to neuronal cells by cischaemic or epoxic conditions by administering a ptc (patched); cc construct which recombines with the genomic hedgehog gene to provide a cc neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a cc erebral tissues against ischaemic linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect construct transcription regulator linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect compania, stroke (thrombolic or embolic) and transient ischaemic conjunction of the brain or spinal cord, oedema caused by trauma, haemorrhage can dencephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons cue to oxygen depletion, including in patients with hypotension. The creatment reduces cIV by at least 25, particularly at least 70,%. The coronarion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse Dhh hedgehog protein sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            멂
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
PT increasing the survival of neuronal, dopaminergic and GABA-nergic PT cells - by using a ptc therapeutic such as a protein kinase pt inhibitor, or an agent derived from hedgehog polypeptides, useful in PT inhibitor, or an agent derived from hedgehog polypeptides, useful in PT the treatment of Parkinson's disease

CC Disclosure; Page 85-86; 138p; English.

CC Invention is based on the finding that hedgehog protein (Dhh). The cc invention is based on the finding that hedgehog proteins are useful CC as protective agents in the treatment and prophylaxis of neurodegenerative disorders resulting from the loss of dopaminergic conducts of GABA-nergic neurons, or the general loss of tissue from the substantia nigra. Exemplary disorders include Parkinson's disease, CC und cerebral ischaemia. The invention relates to hedgehog constructs encoding recombinant hedgehog polypeptides and CC rans activation constructs for altering hedgehog polypeptides and CC as constructs for altering hedgehog gene regulatory constructs of naturally occurring hedgehog proteins on patched signalling) CC and Dhh polypeptides (see W97763-64) are preferred. The products can also be used for the maintenance of differentiated neurons in CC and animal. They can be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-FEB-1999.

The hedgehog therapeutic preferably comprises at least a bioactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog pene (see x25098-107), especially a human hedgehog gene. Sequence 396 AA;
                                                                                                                                                                                                                                                                                                                                                                                  24-APR-1998;

                                                                                                                                                                                                       antibody Claim 3;
This is the amino acid sequence of a precursor of a novel human Desert hedgehog proteen, as deduced from a CDNA clone (see V62394) derived from cell line ARH-77 (ACC CRL-1621). The mature form (see W7959) of the hedgehog protein is also claimed, as are a monoclonal antibody (MAb) that recognises the protein, a process for producing the protein, and a method for detectin, a process for producing the protein, and a method for detecting the protein. The hedgehog protein is useful in establishment of hybridomas which produce antibodies recognising the protein, and the MAb is useful
                                                                                                                                                                                                                                                      Human Desert hedgehog
                                                                                                                                                                                                                                                                                 N-PSDB; V62394

The hedgehog DNA and MAD can be used to elucidate hereditary morphol abnormalities in humans to establish their treatments a Sequence 374 AA;
Claim 17; Page 139-41; 210pp; English.

The sequence represents a mouse sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated from an 8.5-day post coitum mouse library. Probes and primers derived from the sonic hedgehog
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      R77339;

               Method for limiting damage to neurons caused by ischaemic or epoxic conditions - is used for the treatment and prevention of e.g. cerebral infarction, stroke and transient ischaemic attacks Disclosure; Page 68-70; 104pp; English.

A method has been developed for limiting the damage to neuronal cells ischaemic or epoxic conditions by administering a ptc (patched) therapeutic agent to reduce cerebral infarct volume (CIV). Damage to neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic hedgehog gene to provide a second construct which recombines with the genomic second construct which recombines which recombines which recombines which recombines which recombines w
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse Shh hedgehog protein sequence.

Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic attacks. It may also be used as a prophylactic in many other cases of injury to the brain or spinal cord, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The present sequence represents a hedgehog sequence given in the present reventer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W97768;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     182

Disclosure; Page 89-91; 138pp; English.
This polypeptide is mouse shh Sonic hedgehog protein. The invention is based on the finding that hedgehog proteins are useful. Can protective agents in the treatment and prophylaxis of cheurodegenerative disorders resulting from the loss of tissue from the substantia nigra. Exemplary disorders include parkinson's disease, thuntington's disease (both claimed), amyotrophic lateral sclerosis and cerebral ischaemia. The invention relates to hedgehog constructs therapeutics (i.e. hedgehog polypeptides and gene therapy constructs therapeutics on constructs for altering hedgehog gene regulatory sequences) and ptc therapeutics (i.e. agents which mimic the effect of naturally occurring hedgehog proteins on patched signalling) constructs (see w97763-64) are preferred. The products and be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in the products arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Ma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Also claimed is a method for treatment or prevention of disorders of, or surgical or cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of myoblastic-derived tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at least a bloactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog gene (see X35098-107), especially a human hedgehog gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A new method to regulate muscle growth Disclosure; Page 115-116; 130pp; English.

The present sequence is mouse Sonic hedgehog protein Shh. The invention relates to a method for modulating the formation and, maintenance of muscle tissue by ecotopically contacting muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (ONTO-) ONTOGENY INC.

PT claim gene(s)

PS claim 13; Pages 153-154; 210pp; English.

CC This represents a mouse sonic hedgebog (shh) protein sequence. The CLAIM 13; Pages 153-154; 210pp; English and compounds for modulating proliferation or CC differentiation of neuronal cells, cholesterol biosynthesis or transport in a cell comprises contacting a CC cholesterol biosynthesis or transport in a cell comprises contacting a CC collesterol biosynthesis or transport in a cell comprises contacting a CC cell with a compound that affects hedgehog, thereby affecting cholesterol biosynthesis or transport. The methods for inhibiting the neural inducing cell with a compound that affects hedgehog, thereby affecting cholesterol biosynthesis or transport. The methods for inhibiting the neural inducing cativity of a hedgehog polypeptide in cells, and for inducing pituitary gland gene expression utilises sequences selected from a zebrafish compound that hedgehog (twhh) protein (W61485), a zebrafish sonic hedgehog (shh) protein (W61486), a chicken shh protein (W61487) or a mouse shh protein (W61488). The products and methods provide for compounds which can affect hedgehog activity. They can be used for treating disorders which arise from neuronal degeneration or abnormal function. They can calso be used as nerve-sparing agents or in restoring or promoting can also be used for treating during the healing of major limb trauma. They can also be used for treating Smith-Lemii-Optiz syndrome. The products can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş

Claim 17; Page 133-35; 210pp; English.

The sequence represents a chicken sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated from a stage 22/22 limb bud cDNA library. Probes and primers derived from the sonic hedgehog gene may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the protein may be used as therapeutic or research reagents.

PT Method for limiting damage to neurons caused by ischaemic or epoxic PT conditions - is used for the treatment and prevention of e.g.

PT Method for limiting damage to neurons attacks

PT cerebral infarction, stroke and transient ischaemic attacks

PS Disclosure; Page 63-64; 104pp; English.

CC A method has been developed for limiting the damage to neuronal cells by cischaemic or epoxic conditions by administering a ptc (patched)

CC therapeutic agent to reduce cerebral infarct volume (CIY). Damage to construct which recombines with the genomic hedgehog gene activation construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a customatic transcription regulator linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic construct with based as a prophylactic in many other cases of injury to the brain or spinal cord, codema caused by trauma, haemorrhage and tenephalomyelitis, or in conjunction with (coronary bypass) surgery.

CC reatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The coronarion coronarion coronarion with protection.

CC invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Run on:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Total number of hits satisfying chosen parameters:
       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                               Increasing the survival of neuronal, dopaminergic and GABA-nergic recils - by using a ptc therapeutic such as a protein kinase rinhibitor, or an agent derived from hedgehog polypeptides, useful in the treatment of parkinson's disease. Scalaim 30; Page 95-97; 138pp; English.

This polypeptide is human Indian hedgehog protein (Ihh). The protective agents in the treatment and prophylaxis of an eurodegenerative disorders resulting from the loss of dopaminergic and/or GABA-nergic neurons, or the general loss of tissue from the cubertal and/or GABA-nergic neurons, or the general loss of tissue from the substantia nigra. Exemplary disorders include Parkinson's disease, and cerebral ischaemia. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene therapy constructs e.g. constructs encoding recombinant hedgehog gene regulatory constructs for altering hedgehog gene regulatory sequences) and ptc therapeutics (i.e. agents which mimic the effect of naturally occurring hedgehog proteins on patched signalling) constructs in both human and animal subjects. A bioactive polypeptide comprising amino acids 28-202 of human Ihh is preferred. The products can also be used for the maintenance of differentiated concurred the constructs arising from the use of ceretal of treat the constructs.
                                                                                                                                              neuronal cells in an animal. They can be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (ONTO-) ONTOGENY INC. CC The present sequence is human Indian hedgehog protein Ihh. The
CC invention relates to a method for modulating the formation and/or
CC cells, especially muscle tissue by ecotopically contacting muscle
CC cells, especially muscle stem/progenitor cells, in vitro or in
CC vivo, with a hedgehog therapeutic (i.e. hedgehog polypeptides and
CC enclosure that mimics the effect of hedgehog polypeptides and
CC signalling, or activates or potentiates patched signalling) in an
CC amount effective to alter the growth state of the treated cells.
CC of, or surgical or cosmetic repair of, such muscle tissues, by
CC official and bedgehog polypeptide or ptc therapeutic. The
CC disorder may be muscle atrophy, in particular skeletal muscle
CC atrophy or cardiac muscle atrophy, cachaxia, or muscular myopathy
CC (all calimed). The hedgehog polypeptide or ptc therapeutic can
CC inhibit growth of myoblastic drained). The hedgehog therapeutic
CC myoblastic or neoplastic growth of muscle tissue such as in
CC myoblastic sarcoma (also claimed). The hedgehog therapeutic
CC preferably comprises at least a bloactive extracellular portion of
CC an hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog
CC gene (see X2598-107), especially a human hedgehog gene.

PT Method for limiting damage to neurons caused by ischaemic or epoxic productions - is used for the treatment and prevention of e.g. cerebral infarction, stroke and transient ischaemic attacks Disclosure; Page 66-68; 104pp; English.

CC A method has been developed for limiting the damage to neuronal cells by construct provide a provide and transient or epoxic conditions by administering a ptc (patched) construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a construct station of the ptc therapeutic agent is used to protect construct station of the ptc therapeutic agent is used to protect construct tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic consephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The creatment reduces CIV by at least 25, particularly at least 70,%. The present sequence represents a hedgehog sequence given in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Patched; hedgehog; ptc therapeutic; neuroprotective; neuronal cell brain infarction; cerebral infarction; transient ischaemic attack; stroke; cerebral infarct volume, spinal cord; oedema; trauma; haemorrhage; encephalomyelitis; coronary bypass; cerebral hypoxia.

A new method to regulate muscle growth Disclosure; Page 114-115; 130pp; English.
The present sequence is mouse Indian hedgehog protein Ihh. The invention relates to a method for modulating the formation and/or maintenance of muscle tissue by ecotopically contacting muscle cells, especially muscle stem/progenitor cells, in vitro or in vivo, with a hedgehog therapeutic (i.e. hedgehog polypeptides and gene therapy constructs) or put therapeutic (i.e. a small organic molecule that mimics the effect of hedgehog proteins on patched signalling, or activates or potentiates patched signalling) in an amount effective to alter the growth state of the treated cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          05-JUL-1999 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         that are effective in both human and animal subjects. Human Ihh and Dh polypeptides (see W97763-64) are preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-MAR-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Y05512 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               361

The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of myoblastic-derived tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at least a bioactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog sene (see X55098-107), especially a human hedgehog gene.

Claim 17; Page 146-47; 210pp; English.

The sequence represents a mouse Indian hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated by screening of a human fetal lung 5'-stretch plus cDNA library. Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene antibodies generated from the protein may be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                isolated by low stringency screening of a mouse genome DNA library and screening of an 8.5 day post coitum cDNA library. Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the protein may be used as therapeutic or research reagents.

The sequence represents a mouse sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated from an 8.5-day post coitum mouse clibrary. Probes and primers derived from the sonic hedgehog cmay be used as diagnostic agents for neuromuscular, autonomic
